

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) A method for automatically translating content comprising the steps of:

invoking an application program in response to an indication from a user of a mobile device to do so;

scanning content generated by the application to locate translatable content;

translating the located translatable content transmitted from the application program from an initial format of the content to a format supported by the mobile device, the format supported by the mobile device being different than the initial format of the content; and

transmitting the translated content to the mobile device.

2. (original) The method of claim 1, wherein the initial format of the content is wireless markup language, extensible markup language, or hypertext markup language.

3. (original) The method of claim 2, wherein the format supported by the mobile device is wireless markup language, extensible markup language, or hypertext markup language.

4. (original) The method of claim 1, further comprising the step of:

before performing the translating step, determining a format supported by the mobile device.

5. (original) The method of claim 4, wherein the translating step comprises the steps of:

translating the content transmitted from the application program from the initial format of the content to an intermediate format of the content, wherein the intermediate format is different than the initial format; and

translating the intermediate format of the content to the format supported by the mobile device, wherein the intermediate format is different than the format supported by the mobile device.

6. (original) The method of claim 5, wherein the initial format of the content is wireless markup language, extensible markup language, or hypertext markup language.

7. (original) The method of claim 6, wherein the intermediate format is wireless markup language, extensible markup language, or hypertext markup language.

8. (original) The method of claim 7, wherein the format supported by the mobile device is wireless markup language, extensible markup language, or hypertext markup language.

9. (currently amended) A system for automatically translating content comprising:

a processor operable to execute computer program instructions; and

a memory operable to store computer program instructions executable by the processor, for performing the steps of:

invoking an application program in response to an indication from a user of a mobile device to do so;

scanning content generated by the application to locate translatable content;

translating the located translatable content transmitted from the application program from an initial format of the content to a format supported by the mobile device, the format supported by the mobile device being different than the initial format of the content; and

transmitting the translated content to the mobile device.

10. (original) The system of claim 9, wherein the initial format of the content is wireless markup language, extensible markup language, or hypertext markup language.

11. (original) The system of claim 10, wherein the format supported by the mobile device is wireless markup language, extensible markup language, or hypertext markup language.

12. (original) The system of claim 9, further comprising the step of:

before performing the translating step, determining a format supported by the mobile device.

13. (original) The system of claim 12, wherein the translating step comprises the steps of:

translating the content transmitted from the application program from the initial format of the content to an intermediate format of the content, wherein the intermediate format is different than the initial format; and

translating the intermediate format of the content to the format supported by the mobile device, wherein the intermediate format is different than the format supported by the mobile device.

14. (original) The system of claim 13, wherein the initial format of the content is wireless markup language, extensible markup language, or hypertext markup language.

15. (original) The system of claim 14, wherein the intermediate format is wireless markup language, extensible markup language, or hypertext markup language.

16. (original) The system of claim 15, wherein the format supported by the mobile device is wireless markup language, extensible markup language, or hypertext markup language.

17. (currently amended) A computer program product for automatically translating content comprising:

a computer readable medium;

computer program instructions, recorded on the computer readable medium, executable by a processor, for performing the steps of

invoking an application program in response to an indication from a user of a mobile device to do so;

scanning content generated by the application to locate translatable content;

translating the located translatable content transmitted from the application program from an initial format of the content to a format supported by the mobile device, the format supported by the mobile device being different than the initial format of the content; and

transmitting the translated content to the mobile device.

18. (original) The computer program product of claim 17, wherein the initial format of the content is wireless markup language, extensible markup language, or hypertext markup language.

19. (original) The computer program product of claim 18, wherein the format supported by the mobile device is wireless markup language, extensible markup language, or hypertext markup language.

20. (original) The computer program product of claim 17, further comprising the step of:

before performing the translating step, determining a format supported by the mobile device.

21. (original) The computer program product of claim 20, wherein the translating step comprises the steps of:

translating the content transmitted from the application program from the initial format of the content to an intermediate format of the content, wherein the intermediate format is different than the initial format; and

translating the intermediate format of the content to the format supported by the mobile device, wherein the intermediate format is different than the format supported by the mobile device.

22. (original) The computer program product of claim 21, wherein the initial format of the content is wireless markup language, extensible markup language, or hypertext markup language.

23. (original) The computer program product of claim 22, wherein the intermediate format is wireless markup language, extensible markup language, or hypertext markup language.

24. (original) The computer program product of claim 23, wherein the format supported by the mobile device is wireless markup language, extensible markup language, or hypertext markup language.
